

OSA Protocols as advised by OUSD and ACPHD in alignment with the CDC.

**A person who tests positive for Covid must isolate at home for at least 5 days after the onset of symptoms. Day zero (0) is the day you began having symptoms or the date of your positive test (for individuals who are asymptomatic).**

**Ending isolation:** You can end isolation after 5 days if

- you test negative on Day 5 or later
- you do not have a fever
- your symptoms are getting better.

**After the 5th day:**

If you still test positive or if you don't test, isolate for 10 full days, **and** until you don't have a fever. It is strongly recommended that you wear a well-fitting mask around others – especially when indoors – for 10 days, even if you stop isolating earlier.

COVID Tests and masks are available to students on-site.

\*June 24, 2022(Latest OUSD COVID UPDATE)

Indoor masking will no longer be required by the Alameda County Public Health Department. We are grateful to know that [COVID-19 cases](#) have peaked and continue to decline, and case rates are improving across each of the County's largest racial and ethnic groups. Please remember that **indoor masking is still strongly recommended by state and county public health departments.**

We want to ensure everyone has information about our testing program for the remainder of the summer and into the 2022-23 school year.
